

Poker HUD Store Design Document

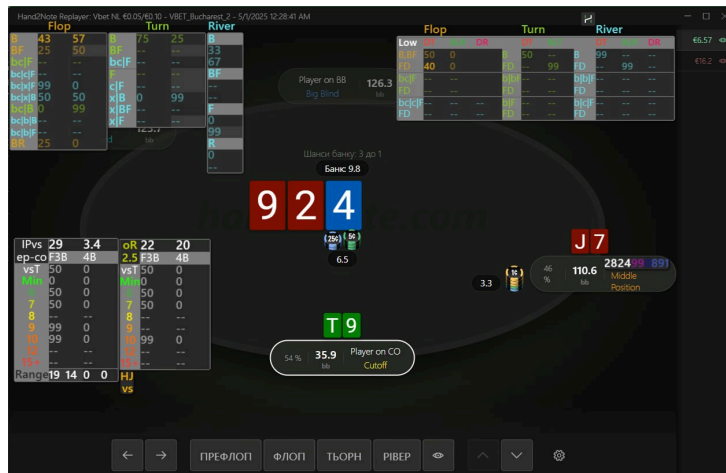

Well, in short:

The site has a Poker Hud Store, maybe there will be other software, but for now it's about Huds. There will be a certain list of Huds as icons with a brief description of the characteristics, maybe a couple of words from the authors. After a product is opened, either a description appears, or, which is probably better, a video background. which can consist of beautiful moments of the game, which we will shoot, you can see how they once did for me, but there is sora. or just a background of graphs that moves a little, well, you suggest. The graphs will look like this

website with interesting plugins <https://gsap.com/showcase/>

also, when you choose a had, situation options appear, well, about 5-10 for each. when you choose some

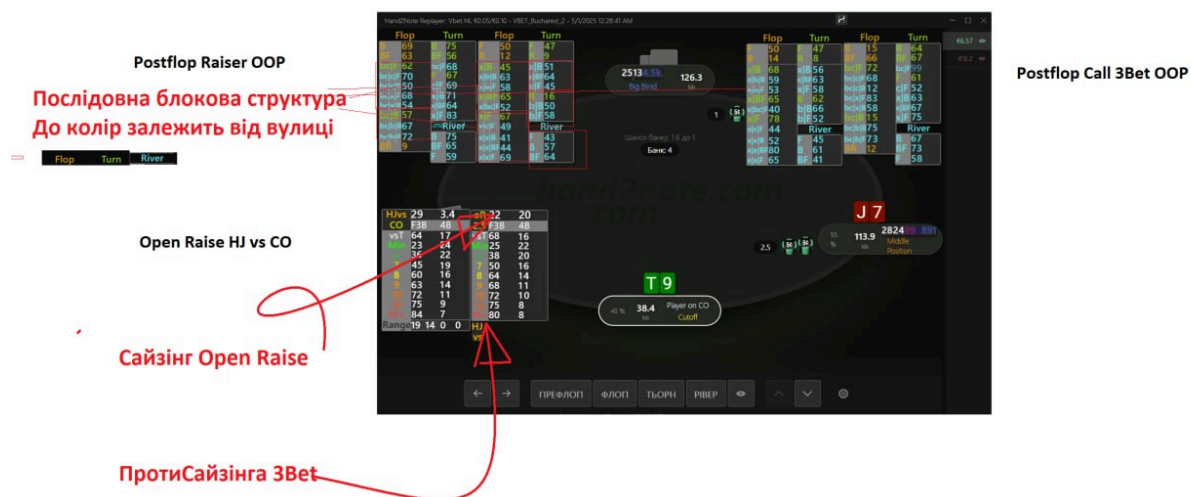

A table appears.

The button further switches forward and backward

Well, I started from the end, because the description was on the first page, and that's how it turned out

is different, in this case only the upper right side and its description, and it is not noticeable, the first screen would be like this.

Description will be needed everywhere

in total, about 15-30 pictures for each program (hada)

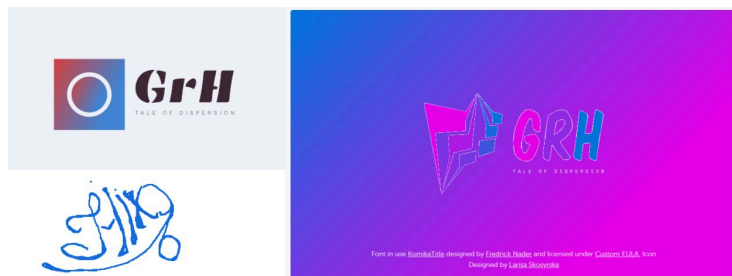

There may be additional images for pop-ups, these are windows that are attached to the skin, for example.

If you clicked on the number, another picture appeared.

In total, the Hadi section is a different software. There will be about 3 Hadis in the Hadi section, probably only 3 at the moment. For each of them, there are 5-10 situations with 3-5 screens, it is necessary to make it possible to add Hadis and change screens, even if it is not free, but so that it does not turn into a problem

Personal account where you can see the list of purchases and the expiration date, if there are referrals or sub-referrals, it is desirable to see statistics, control what could be done online

And the logo is SIN :) well, how do we choose, or will you choose :)
